PROFILE

Unity developer with 4+ years of experience building games, graphics and tools. I develop independent games and collaborate with artists and animators on team projects. Looking to own game systems within a larger team.

SELECTED EXPERIENCE

Unity Developer · Bulltraffic

Mobile game project · Graphics, content integration and optimization

- Owned graphics implementation in Unity, integrated artists' and animators' content and maintained the project structure.
- Built a custom URP pass for localized brightening and darkening; reduced its cost using lower-resolution processing, blur and upsampling.
- Created procedural materials with noise and vertex-color blending, shaders and VFX; used Substance Designer.
- Profiled on iPhone and Android with Profiler, Memory Profiler and Frame Debugger. Project on hold; selected VFX shared with permission.

Current work: playable development, alongside independent game projects.

Earlier experience

Team Lead, Android projects (Mar–Nov 2023): coordinated freelance contributors and published apps on Google Play. Freelance Unity Developer (Dec 2021–Jul 2023): delivered small Unity projects.

SELECTED GAMES & ENGINEERING

Fireline: Zombies — solo developer. FPS / defense game with shooting, enemy waves, construction and progression. Separate mission construction budgets and persistent upgrade currency. [RuStore](#)

Chromble — solo developer. Color puzzle with a separate C# game core, gravity-driven cascades and adaptive piece generation based on board occupancy and valid placements. [Yandex Games](#)

Voxel Pathfinding: adaptive voxel subdivision, graph construction and route processing for 3D navigation.

Socket.IO Networking: Unity synchronization layer with attribute-based RPCs, network variables, tick updates and buffered interpolation.

Unity tooling: reusable logging, metrics HUD, splines and editor utilities packaged for UPM.

SKILLS & WORKFLOW

Development: Unity, C#, gameplay systems, event-driven architecture, custom editors, Addressables, Git.

Graphics: URP, Shader Graph, HLSL, VFX Graph, Particle System, Substance Designer; mobile profiling and optimization.

Networking & integrations: Photon, Mirror, Socket.IO, SDK integration, Firebase, Yandex Games; backend interaction with ASP.NET Core and Node.js.

AI-assisted workflow: prototyping, exploring solutions and automating routine work. I review generated code and remain responsible for architecture and implementation.
